The XY sex-determination system is the sex-determination system found in humans, most other mammals, some insects (), some snakes, and some plants (). In this system, the sex of an individual is determined by a pair of sex chromosomes. Females typically have two of the same kind of sex chromosome (XX), and are called the homogametic sex. Males typically have two different kinds of sex ...

In mammals, all intact developmentally typical males have a penis, but the clitoris in the females of the following species is sufficiently enlarged that it is usually termed a pseudo-penis: spotted hyena, squirrel monkey, [citation needed] lemur, juvenile fossa and binturong. The enlarged clitoris in the fossa is supported by an os clitoridis, a bone similar to the os penis found in most mammals.

1. Introduction. The investigation and management of abnormal uterine bleeding (AUB) among nongravid women of reproductive age has been hampered both by confusing and inconsistently applied nomenclature and by the lack of standardized methods for investigation and categorization of the various potential etiologies. These deficiencies hamper the ability of investigators to study homogenous ...

Infertility means not being able to get pregnant after one year of trying (or six months if a woman is 35 or older). Women who can get pregnant but are unable to stay pregnant may also be infertile. About 10 percent of women (6.1 million) in the United States ages 15-44 have difficulty getting pregnant or staying pregnant, according to the Centers for Disease Control and Prevention (CDC).
