Remember, that what we calculate is not the pH at the end point - but the theoretical pH at the equivalence point. In the equivalence point we have solution containing pure salt that is a product of the neutralization reaction occurring during titration.

Chemists use acid-base reactions, in conjunction with an indicator (a compound that changes color

when in acidic or basic conditions), to analyze the amount of acid or base in a substance. The amount of acetic acid in vinegar, for example, can be determined by titrating a sample of the vinegar against a strong base ...

38mm caps and closures are designed specifically for bottles, jars and containers with a 38-400 thread finish. Caps and closures are measured using two numbers in the format of 38-400 or 38/400: the first number is the distance in millimeters from outer thread to outer thread when looking at the top of the container; the second is a reference to the design of the threads themselves.
