Iron absorption takes place largely in the proximal small intestine and is a carefully regulated process. In general, there is no regulation of the amounts of nutrients absorbed from the gastro intestinal tract. A notable exception is iron, the reason that absorption must be carefully regulated is that the body does not possess a physiological mechanism to eliminate much iron from the body.

GEOLOGY 115. PHYSICAL PROPERTIES OF GEMS. Properties of Gemstones: There are two sets of characteristics possessed by every gemstone, and by which they are studied, identified and evaluated: 1) physical properties, and 2) optical properties. In this lesson we'll be concerned with physical properties: those which do not depend on the gem's interaction with light to be expressed or measured.
