where: – The amount of moles represented by a number, – The amount of particles of the given substance or element, – The Avogadro's number. For example, one mole of hydrogen atoms will be defined as containing 6.022×10^{23} of hydrogen atoms, which has a mass of 1.008 grams.. The molar mass of a substance is the mass of a sample divided by the amount of substance in that sample.

Calculating formula masses. Since a molecule - scratch that, there we go again, calling everything molecules! Since a formula is made of atoms, we can calculate a formula mass by simply adding up

all the atoms that are in it. This is an application of the law of conservation of mass.

Calculating formula masses - Digipac

Mass percent tells you the percentage of each element that makes up a chemical compound. Finding the mass percent requires the molar mass of the elements in the compound in grams/mole or the number of grams used to make a solution. It is simply calculated using a basic formula dividing the mass of the element (or solute) by the mass of the compound (or solution).
