Limp mode is a security function for your engine and transmission. When the engine or transmission control unit has recognized a serious faulty parameter from the engine or transmission, the car will go into limp mode. The limp mode does often reduce the power and limit the RPM of the engine so you can drive your car to a workshop without damaging the engine.

Broadband faults. Most broadband faults are usually within your property, the signal usually arrives at the incoming point where it then becomes 'corrupted' either with faulty equipment or wiring, the ideal solution is to always plug the router into the 'master socket', however this may not always be convenient.

The total range of an infiNET EX wireless network is dependent on the placement and capabilities of each network device. Employing a mesh network topology, nearly every infiNET EX device on the network acts as an "expander," relaying wireless commands between the gateway and all the other "EX" devices on the network.
