This is not at all related to Machine Learning. I lived in Squirrel Hill as a graduate student at Carnegie Mellon so the massacre there is feeling particularly immediate. While the person who did it is obviously culpable, the pattern of events makes it clear that others bear responsibility as well.

Computational complexity theory focuses on classifying computational problems according to their inherent difficulty, and relating these classes to each other. A computational problem is a task solved by a computer. A computation problem is solvable by mechanical application of mathematical steps, such as an algorithm.. A problem is regarded as inherently difficult if its solution requires ...

The old quantum theory is a collection of results from the years 1900–1925 which predate modern quantum mechanics. The theory was never complete or self-consistent, but was rather a set of heuristic corrections to classical mechanics. The theory is now understood as the semi-classical approximation to modern quantum mechanics.. The main tool of the old quantum theory was the Bohr-Sommerfeld ...

One of the things that bothers me about a lot of what I read the in social sciences that's, as you say, 'globally oriented', is that it seems to start with a bunch of certainties, a bunch of assumptions - a kind of Western liberal common sense - that we know how countries ought to be organized.

Research on a new metaheuristic for optimization is often initially focused on proof-of-concept applications. It is only after experimental work has shown the practical interest of the method that researchers try to deepen their understanding of the method's functioning not only through more and more sophisticated experiments but also by means of an effort to build a theory.

Information theory - Physiology: Almost as soon as Shannon's papers on the mathematical theory of communication were published in the 1940s, people began to consider the question of how messages are handled inside human beings. After all, the nervous system is, above all else, a channel for the transmission of information, and the brain is, among other things, an information processing and ...

Keynesian economics is an economic theory named after John Maynard Keynes, a British economist who lived from 1883 to 1946. He is most well-known for his simple explanation for the cause of the Great Depression. His economic theory was based on a circular flow of money, which refers to the idea that when spending increases in an economy, earnings also increase, which can lead to even more ...
