Multiple-unit train control, sometimes abbreviated to multiple-unit or MU, is a method of simultaneously controlling all the traction equipment in a train from a single location, whether it is a Multiple unit comprising a number of self-powered passenger cars or a set of locomotives.. A set of vehicles under multiple unit control is referred to as a consist in the United States.

Multiple-unit train control - Wikipedia

In the mid-90s, CP set out to update and expand its locomotive fleet by purchasing AC4400 locomotives from General Electric (GE). Twenty-two years later, we are taking those same locomotives and running them through GE's modernization program, a process whereby older locomotives like the CP9669 and 9679, get disassembled and rebuilt with modern technology.

Dublin tramways was a system of trams in Dublin, Ireland which commenced line-laying in 1871, and began service in 1872, following trials in the mid-1860s. Established by a number of companies, the majority of the system was eventually operated by forms of the Dublin United Tramways Company (DUTC), dominated for many years by William Martin Murphy. Most of the services ran within the city ...
