As with most tetrapods, canine copulation involves the male mounting the female from behind, a position that is referred to as "doggy style" but does not have a specifically known origin. When a male canine is interested in mounting a female, he will sniff the female's vulva. If the female is unreceptive, she may sit, lie down, snap, retreat, or otherwise be uncooperative.

1. Introduction. The investigation and management of abnormal uterine bleeding (AUB) among nongravid women of reproductive age has been hampered both by confusing and inconsistently applied nomenclature and by the lack of standardized methods for investigation and categorization of the various potential etiologies. These deficiencies hamper the ability of investigators to study homogenous ...

In choosing a method of contraception, dual protection from the simultaneous risk for HIV and other STDs also should be considered. Although hormonal contraceptives and IUDs are highly effective at preventing pregnancy, they do not protect against STDs, including HIV.

### **Contraception | Reproductive Health | CDC**

Between 10 and 15 percent of couples will experience infertility. This means they will not conceive after at least one year of trying. Of these infertile couples, approximately one-third will discover fertility problems on the woman's side, another third will find the problem on the man's side, and the rest will find problems on both sides or receive a diagnosis of unexplained infertility.
