Measuring Segments. Ruler postulate: The points on any line can be paired with real numbers so that, given any two points P and Q on the line, P corresponds to zero, and Q corresponds to a positive number. If Q is between P and R, then $QP + QR = PR$. If $PQ + QR = PR$, then Q is between P and R.

Draw a line segment that has a length of 6 inches. b. Use a standard-sized paper clip to measure the length of the line segment. c. Write conversion factors from paper clips to inches and vice versa. 1 paper clip ____ in. = 1 in. ____ paper clip = d. A straightedge is a tool that you can use to draw a straight line.

1 EXPLORATION: Measuring Line Segments Using Nonstandard Units

Measure line segments. The length of a line segment can be measured (unlike a line) because it has two endpoints. While the length or the measure is simply written AB. The length could either be determined in Metric units (e.g. millimeters, centimeters or meters) or Customary units (e.g. inches or foot). Two lines could have the same measure but still not be identical.
