A coral reef is an underwater ecosystem characterized by reef-building corals. Reefs are formed of colonies of coral polyps held together by calcium carbonate. Most coral reefs are built from stony corals, whose polyps cluster in groups.. Coral belongs to the class Anthozoa in the animal phylum Cnidaria, which includes sea anemones and jellyfish. Unlike sea anemones, corals secrete hard carbonate ...

Definition. The term problem solving means slightly different things depending on the discipline. For instance, it is a mental process in psychology and a computerized process in computer science. There are two different types of problems, ill-defined and well-defined: different approaches are used for each.

The article illustrates an approach to automated acceptance testing in developing software with Java. Acceptance tests directly tie into software requirements specification and the key for achieving maintainable tests is proper handling of traceability between the requirements and implementation as well as between the requirements and acceptance tests.

Automated Acceptance Tests and Requirements Traceability

Asphalt surface rutting must be considered separately from pavement rutting that results from permanent vertical subgrade deformation and base course densification or instability. Where it does occur, asphalt rutting is a significant distress mode for airport surface asphalt. However, even in hot countries such as Australia, as long as the asphalt mixture is designed and constructed ...

There are many theories that explain how adults learn and each has its own merits. This Guide explains and explores the more commonly used ones and how they can be used to enhance student and faculty learning. The Guide presents a model that combines many of the theories into a flow diagram which can be followed by anyone planning learning. The schema can be used at curriculum planning level ...

Human evolution is the evolutionary process that led to the emergence of anatomically modern humans, beginning with the evolutionary history of primates—in particular genus *Homo*—and leading to the emergence of *Homo sapiens* as a distinct species of the hominid family, the great apes. This process involved the gradual development of traits such as human bipedalism and language, as well as ...
