Thermal energy storage (TES) is achieved with widely differing technologies. Depending on the specific technology, it allows excess thermal energy to be stored and used hours, days, or months later, at scales ranging from individual process, building, multiuser-building, district, town, or region. Usage examples are the balancing of energy demand between daytime and nighttime, storing summer ...

In chemistry and biology a cross-link is a bond that links one polymer chain to another. These links may take the form of covalent bonds or ionic bonds and the polymers can be either synthetic polymers or natural polymers (such as proteins).. In polymer chemistry "cross-linking" usually refers to the use of cross-links to promote a change in the polymers' physical properties.

(2005-07-15) The Lorentz Force The Lorentz force on a test particle defines the electromagnetic field(s).. The expression of the Lorentz force introduced here defines dynamically the fields which are governed by Maxwell's equations, as presented further down. Neither of these two statements is a logical consequence of the other.
