Nuclear chemistry is the subfield of chemistry dealing with radioactivity, nuclear processes, and transformations in the nuclei of atoms, such as nuclear transmutation, and nuclear properties.. It is the chemistry of radioactive elements such as the actinides, radium and radon together with the chemistry associated with equipment (such as nuclear reactors) which are designed to perform nuclear ...

Nuclear chemistry - Wikipedia

The word quantum is often mis-used as an adjective to mean the opposite of its definition or in an inappropriate context. For example, the term "quantum mysticism" implies a correlation between quantum mechanics and parapsychology that has not been supported by empirical data. The phrase "quantum leap" is used to suggest a large change, while the definition of quantum is that the change is the ...
