Daniel V. Schroeder: An Introduction to Thermal Physics Here are my solutions to various problems in the textbook An Introduction to Thermal Physics, by Daniel V. Schroeder (Addison-Wesley, 2000). Obviously I can't offer any guarantee that all the solutions are actually correct, but I've given them my best shot. After some consideration, I've decided to repost this index to the solutions.

Schroeder: An Introduction to Thermal Physics

The thermal conductivity of a material is a measure of its ability to conduct heat. It is commonly denoted by k , κ , or λ . Heat transfer occurs at a lower rate in materials of low thermal conductivity than in materials of high thermal conductivity.

Anti-gravity (also known as non-gravitational field) is a theory of creating a place or object that is free from the force of gravity. It does not refer to the lack of weight under gravity experienced in free fall or orbit, or to balancing the force of gravity with some other force, such as electromagnetism or aerodynamic lift. Anti-gravity is a recurring concept in science fiction, particularly ...

Highlights Xylans and mannans can be obtained from side-streams of agriculture and forestry industry. Biodegradable and/or edible films are foreseen as highly interesting applications for xylans and mannans. Xylan- and mannan-based films show low oxygen and grease permeability. The films can be strengthened by crosslinking or by blending with other polymers or nano-sized particles.
