Modern physics is an effort to understand the underlying processes of the interactions of matter utilizing the tools of science & engineering. In general, the term is used to refer to any branch of physics either developed in the early 20th century and onwards, or branches greatly influenced by early 20th century physics.

Physics (from Ancient Greek: φυσική (ἐπιστήμη), romanized: physikḗ (epistḗmē), lit. 'knowledge of nature', from φύσις phýsis "nature") is the natural science that studies matter, its motion, and behavior through space and time, and that studies the related entities of energy and force. Physics is one of the most fundamental scientific disciplines, and its main goal is ...

En física, la impenetrabilidad (de impenetrable) es la resistencia que opone un cuerpo a que otro ocupe su lugar en el espacio .Ningún cuerpo puede ocupar al mismo tiempo el lugar de otro. Así mismo, la impenetrabilidad es la resistencia que opone un cuerpo a ser traspasado. Se encuentra en la categoría de propiedad general.

Radioactive decay is the process by which an excited, unstable atomic nucleus loses energy by emitting radiation in the form of particles or electromagnetic waves, thereby transitioning toward a more stable state.. The atomic nucleus comprises certain combinations of protons and neutrons held in a stable configuration through a precise balance of powerful forces: The strong force holding the ...

Il principio di esclusione di Pauli è un principio della meccanica quantistica che afferma che due fermioni identici non possono occupare simultaneamente lo stesso stato quantico.. Formulato da Wolfgang Pauli nel 1925, è anche citato come principio di esclusione o principio di Pauli.. Il principio di esclusione si applica solo ai fermioni, che formano stati quantici antisimmetrici e hanno ...

En física, la energía cinética de un cuerpo es aquella energía que posee debido a su movimiento. Se define como el trabajo necesario para acelerar un cuerpo de una masa determinada desde el reposo hasta la velocidad indicada. Una vez conseguida esta energía durante la aceleración, el cuerpo mantiene su energía cinética salvo que cambie su velocidad.

Le moment magnétique d'un corps se manifeste par la tendance qu'a ce corps à s'aligner dans le sens d'un champ magnétique. L'exemple le plus courant est celui de l'aiguille d'une boussole : laissée libre de tourner, l'aiguille s'aligne dans la direction du pôle nord, ce qui montre qu'elle subit un moment qui tend à l'aligner dans cette direction.
