Geometry (from the Ancient Greek: γεωμετρία; geo-"earth", -metron "measurement") is a branch of mathematics concerned with questions of shape, size, relative position of figures, and the properties of space. A mathematician who works in the field of geometry is called a geometer.. Geometry arose independently in a number of early cultures as a practical way for dealing with lengths ...

The best intermediate-level explanation of classical statistics on the market! From basic dice probabilities to modern regression analysis and correlation, Professor Bulmer provides explanations, graphs, charts, and problems (with answers). Equal stress is given to theory and applications. The author assumes no previous knowledge of statistics or probability; only basic calculus is needed. </

"Morse function" redirects here. In another context, a "Morse function" can also mean an anharmonic oscillator see Morse potential.. In mathematics, specifically in differential topology, Morse theory enables one to analyze the topology of a manifold by studying differentiable functions on that manifold. According to the basic insights of Marston Morse, a typical differentiable function on a ...

Open questions Mathematics is something of an extreme case. In most other sciences, new theories and ideas tend to replace older ones. Hence in most sciences work that was done long ago (exactly how long depending on the particular science) is usually superceded by work done as recently as a few decades ago, or less.

An integral of the form  $\int f(z)dz$ , (1) i.e., without upper and lower limits, also called an antiderivative. The first fundamental theorem of calculus allows definite integrals to be computed in terms of indefinite integrals. In particular, this theorem states that if  $F$  is the indefinite integral for a complex function  $f(z)$ , then  $\int_a^b f(z)dz = F(b) - F(a)$ .

### Indefinite Integral -- from Wolfram MathWorld

This is the convention used by the Wolfram Language command `RotationMatrix[theta]`. On the other hand, consider the matrix that rotates the coordinate system through a counterclockwise angle  $\theta$ . The coordinates of the fixed vector in the rotated coordinate system are now given by a rotation matrix which is the transpose of the fixed-axis matrix and, as can be seen in the above diagram, is ...
