### The Male Reproductive System Biology

The male reproductive system consists of a number of sex organs that play a role in the process of human reproduction. These organs are located on the outside of the body and within the pelvis.. The main male sex organs are the penis and the testicles which produce semen and sperm, which, as part of sexual intercourse, fertilize an ovum in the female's body; the fertilized ovum develops into a ...

### Male reproductive system - Wikipedia

Testes The testes (singular, testis) are paired structures that originally develop in the abdomen and descend into the scrotum, a sac of skin and connective tissue positioned outside the pelvic cavity. This scrotal location is important for maintaining a testicular temperature, approximately 1.5 to 2.5 degrees Celsius (34.7 to 36.5 degrees Fahrenheit) below body temperature, required for ...

### Male Reproductive System - Biology Encyclopedia - cells ...

The male reproductive system is a series of organs located outside of the body and around the pelvic region of a male that contribute towards the reproduction process. The primary direct function of the male reproductive system is to provide the male sperm for fertilization of the ovum.

### Reproductive system - Wikipedia

Human reproductive system, organ system by which humans reproduce and bear live offspring. Provided all organs are present, normally constructed, and functioning properly, the essential features of human reproduction are (1) liberation of an ovum, or egg, at a specific time in the reproductive cycle, (2) internal fertilization of the ovum by spermatozoa, or sperm cells, (3) transport of the ...

### human reproductive system | Definition, Diagram & Facts ...

#### Reproductive System — bozemanscience

Reproductive System. Male and female reproductive structures and their functions gonads male: testes makes sperm in the seminiferous tubules.

### Reproductive System and Development - MCAT Review

All the topics in Human Biology which have been covered so far - the body systems and their functioning - apply equally to males and females. However, in the case of the reproduction process, two different systems are required, of different sexes, male and female. This is, of course, why the process is called sexual reproduction. Use the mouse or tap the screen to label these diagrams of the ...

### THE HUMAN REPRODUCTIVE SYSTEM - BioTopics Website

early development and nutrition of the embryo. The sexual dimorphism in gamete size is echoed in many other traits of adults and has resulted in the evolution of different male and female reproductive strategies. Sexual reproduction is widespread in almost all groups of multicellular organisms, but the reasons for its evolution and prevalence are not well known.
