In mathematics, trigonometric identities are equalities that involve trigonometric functions and are true for every value of the occurring variables where both sides of the equality are defined. Geometrically, these are identities involving certain functions of one or more angles.They are distinct from triangle identities, which are identities potentially involving angles but also involving ...

List of trigonometric identities - Wikipedia

The WHERE clause is always conceptually applied (the execution plan can do what it wants, obviously) prior to the GROUP BY.It must come before the GROUP BY in the query, and acts as a filter before things are SUMmed, which is how most of the answers here work.. You should also be aware of the optional HAVING clause which must come after the GROUP BY.This can be used to filter on the resulting ...
